## PROFESSIONAL SUMMARY

Linux System Administrator with 4.5+ years of experience supporting enterprise production environments across Red Hat Enterprise Linux (RHEL) and SUSE Linux Enterprise Server (SLES). Experienced in L2/L3 production support, Bash scripting, Ansible automation, OS patching, performance monitoring, filesystem management, vulnerability remediation, and server lifecycle management. Skilled in troubleshooting CPU, memory, swap, disk, service, and access-related issues; automating routine operational tasks; executing maintenance activities; and supporting production stability, compliance, and root cause analysis.

## TECHNICAL SKILLS

| | |
|---|---|
| **Operating Systems** | Red Hat Enterprise Linux (RHEL), SUSE Linux Enterprise Server (SLES) |
| **Scripting & Automation** | Bash/Shell Scripting, Ansible, Linux command-line utilities, cron-based scheduling |
| **Programming & Web** | Java, Python, Node.js, SQL, HTML, CSS, JavaScript |
| **Version Control** | Git, GitHub |
| **System Administration** | User and group management, SSSD, permissions, SSH, services, process management |
| **Performance & Troubleshooting** | CPU, memory and swap analysis, system logs, SOS reports, root cause analysis |
| **Storage Management** | LVM, filesystem creation and resizing, mount operations, disk space management |
| **Patching & Security** | JetPatch, OS patching, validation, vulnerability remediation, CrowdStrike support |
| **Monitoring & Operations** | OpsRamp alerts, daily health checks, log rotation, log management, disk cleanup |
| **Infrastructure Operations** | Server build, VM/OS upgrades, decommissioning, RMT setup, cluster freeze/unfreeze |

## PROFESSIONAL EXPERIENCE

### Linux System Administrator (L2/L3) | Wipro Limited — April 2022 - Present

- Administer and support enterprise production servers running RHEL and SUSE Linux.
- Perform L2/L3 incident troubleshooting, investigate system issues, and support root cause analysis to maintain production stability.
- Monitor CPU, memory, swap, process utilization, and filesystem capacity; investigate resource bottlenecks and perform corrective actions.
- Manage LVM operations including logical volume creation, resizing, filesystem expansion, and mount point management.
- Execute server provisioning, operating system upgrades, VM upgrades, and server decommissioning activities.
- Conduct daily server health checks and investigate monitoring alerts generated through OpsRamp.
- Use Ansible to automate recurring administration tasks and support operating system patching activities.
- Use Bash and standard Linux command-line utilities for routine system administration, repeatable operational checks, and troubleshooting.
- Manage cron jobs for scheduled operational activities, maintenance tasks, and automated scripts.
- Configure and troubleshoot SSSD and manage Linux user access and authentication-related issues.
- Execute OS patching using JetPatch, including pre-checks, patch execution, post-patch validation, and issue resolution.
- Perform log management, log rotation, disk cleanup, and filesystem capacity monitoring to maintain system availability.
- Generate SOS reports and collect diagnostic information for troubleshooting and root cause analysis.
- Perform cluster freeze/unfreeze activities during planned maintenance windows, following operational procedures.
- Support RMT setup and server/VM upgrade activities in SUSE environments.

- Install and troubleshoot CrowdStrike agents and support vulnerability remediation and security compliance activities.
- Coordinate memory changes, filesystem resizing, maintenance activities, and incident resolution under change management procedures.

## SCRIPTING & AUTOMATION EXPERIENCE

### Bash / Shell Scripting

- Apply variables, command substitution, conditional statements, loops, exit codes, and pipelines to simplify repetitive Linux administration activities.
- Use grep, awk, sed, find, df, free, ps, and systemctl for system checks, reporting, and troubleshooting.
- Support scheduled execution of maintenance and operational scripts through cron jobs.

### Ansible Automation

- Use Ansible to automate Linux administration tasks and support OS patching activities.
- Work with inventories, playbooks, modules, task execution, and execution results within assigned responsibilities.
- Support repeatable operational workflows that reduce manual intervention in routine administration.

## CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)
- L3 Linux Catapult Certified
- Responsive Web Design Certification
- Foundational C# with Microsoft
- GitHub Foundations Certified

## ACHIEVEMENTS & RECOGNITION

- School Captain - Leadership role for one year.
- Microsoft Learn Student Ambassador.
- Achieved a 4/5 performance rating in annual appraisals for three consecutive years.
- Earned 39 awards and 7 badges through Wipro Winner Circle.
- Received the Best Prodigy Award, FY 2023-24.
- Recognized as a Top Contributor for Cost Savings, FY 2024-25.
- Received the Unit Award for the Red Hat Q3 Challenge, 2025.

## EDUCATION

M.Tech (Master of Technology) - BITS Pilani | 8.5 CGPA

BCA (Bachelor of Computer Applications) - Aryabhatta Knowledge University, Patna | 79%

Diploma in Computer Applications (DCA) - 81%

Class X (CBSE) - 10 CGPA and XII (CBSE) 85% - Imperial Public School, Hathwa
